

03 - Colour-enhancing technologies

Reviving the hidden beauty of stone

Products designed to improve the appearance of surfaces.

1

What they are: Enriching solutions for stone.

2

Ideal for: Granite, marble, marble-concrete agglomerates, natural stone.

3

Advantages: Enrichment of the slab through its aesthetic enhancement and the removal of any small defects.

Characteristics:

- Penetrate and do not form a surface film;
- UV resistant;
- Do not yellow over time;
- Compatible with the various finishes of natural stone.

The Technologies

The natural stone products currently available on the market offer a wide variety of colours and finishes.

The beauty of these materials can be further enhanced with the aid of advanced technologies.

Colour-enhancing products improve and distinguish the appearance of stone, enriching the slab and removing any signs of honing.

The use of a colour enhancer not only protects the material but also increases its natural tone, adding depth and intensity to the colour.

The various products act in different ways: some vary the colour and enhance the veins, while others polish the slab as well, increasing its gloss and correcting minor defects that may arise during the processing phase.

These technologies effectively integrate with the use of a waxing machine, by supporting and completing the polishing phase.

FILA TECH colour-enhancers withstand UV rays, do not yellow and adapt to various natural stone finishes. Some of them enrich the slab by adding water-repellent and stain resistant properties.
