

02 - Total Protection Acid-Proofing Technology

An invisible barrier

against acidic aggressions

An advanced coating that preserves and enhances stone surfaces.

1

What it is: An acid-proofing, stain-proofing and water-repellent product.

2

Ideal for: Natural stones sensitive to acids.

3

Advantages: Creates a micro-coat on the surface that acts as a protective barrier against acid aggressions.

Characteristics:

- Acid resistant barrier;
- Preserves the material's natural qualities;
- Aesthetic finish;
- Enhances the colour of dark surfaces;
- Does not yellow over time;
- Makes maintenance easier.

The Technology

Among the main staining agents capable of damaging stone surfaces, compounds such as citric acid and acetic acid – found in household substances such as vinegar, lemon juice and other fruit juices – are the most dangerous.

These substances chemically attack the surface, causing irreparable alterations.

The acid-proofing technology formulated by FILA creates a micro-coat on the surface that acts as a protective barrier against these agents, thus preserving the beauty and integrity of natural stone.

TOTAL PROTECTION is the ultimate frontier for the protection of surfaces.

This acid-proofing, stain-proofing and water-repellent treatment not only preserves the natural beauty of stone, but also makes it more practical to use.

Thanks to its advanced formula, it ensures lasting protection against acids and maintains an aesthetic finish that does not yellow over time. Moreover, the transparent coating facilitates maintenance, allowing the stone surface to adapt perfectly to everyday activities without any impact on its beauty and durability.
